

Eviti[®] Evidence-Based Medicine Library and Clinical Trials Database

Aligning Quality Oncology Care with Evidence-Based Data & Clinical Trials

DATA SHEET

Eviti modernizes oncology care by combining advanced technology with clinical expertise. The Eviti Library empowers oncology professionals to make informed, compassionate treatment decisions, helping every patient to receive high-quality, evidence-based care.

EVIDENCE-BASED MEDICINE LIBRARY FACTS

- Over 4,600 peer-reviewed, evidence-based, multi-modality oncology regimens encoded in proprietary format to facilitate quality care and its reimbursement at the moment of clinical prescribing.
- Over 9,500 federally-registered cancer clinical trials through data feeds from the National Cancer Institute.
- Managed by a team of oncology and informatics professionals, our proprietary system ensures every regimen is current, clinically validated, and ready to support high-value care.
- Clinical content is developed through comprehensive study and surveillance of the accepted standards of practice, national oncology consensus group practice guidelines, and published clinical trials.

REGIMENS IN THE EVIDENCE-BASED MEDICINE LIBRARY ARE SUPPORTED BY:

- US Food and Drug Administration [FDA]
- National Cancer Institute [NCI]
- American Society for Therapeutic Radiology and Oncology [ASTRO]
- National Comprehensive Cancer Network [NCCN] Compendium
- American College of Radiology [ACR]
- American Society of Clinical Oncology [ASCO]
- Other recognized medical societies

The Eviti platform facilitates informed decision making by providing transparent access to regimen details—including level of evidence, expected outcomes, top toxicities, literature references, and cost information. Practices and payers can set preferred treatment options, promoting value-based oncology care tailored to each patient’s needs.

MINIMUM REQUIREMENTS FOR INCLUSION IN THE LIBRARY

Every regimen in the Eviti Library meets rigorous inclusion criteria, ensuring recommendations are clinically sound, ethically responsible, and aligned with the highest standards of care.

The treatment must be recommended by one of the nationally/internationally recognized oncology consensus group organizations.

Data from the supporting clinical trial must be available. For recommendation or endorsed treatments that do not have diagnosis-specific clinical trial support, data may be extrapolated from closely related clinical studies.

Each individual drug within the regimen must be FDA approved for marketing in the US for the specific indication at issue, meaning the drugs are not experimental.

Eviti Connect is an intelligent treatment plan validation platform that combines advanced technology with clinical expertise, empowering providers and payers to confidently prescribe and reimburse high-quality, high-value care.
